## Student excursion in the

Master degree course “**Fruit and postharvest physiology**” on

8<sup>th</sup> December 2016

Are you interested in an overview of pre- and post-harvest physiological aspects of perennial fruit tree species? Then join this excursion and travel down to the Lake Constance to visit the largest fruit production area in Germany. You will be welcomed at the Centre of Competence for Fruit Growing (KOB) that has a State mandate for applied research and technology transfer. The extensive experimental research orchard and the state-of-the-art storage facility are unique characteristics of the KOB, which facilitate specific orchard trials, harvest practices and innovative supply chain management systems. The tour will also visit commercial fruit orchards as well as one storage and packhouse facility in the region.
